

## Agilent Technologies 81100 Family of Pulse Pattern Generators

### Technical Specifications Version 1.2

**Agilent 81110A**

#### Signals for testing digital designs and components

The Agilent 81101A, 81104A, 81110A and 81130A generate all the standard pulses and digital patterns needed to test current logic technologies (CMOS, TTL, LVDS, ECL, etc.).

With the optional second channel on all of the models from 80 MHz to 660 MHz, multi-level and multi-timing signals can be obtained using the internal channel addition feature.

- Variable pulse parameters in pattern mode as well as in pulse mode (not on the 81130A)
- Synchronously triggerable
- Simulation of reflections/distortions (81104A, 81110A)
- Three/four-level codes (81104A, 81110A)

#### Flexible pulses or patterns for digital designs Key Features

- Pattern mode on all models from 80 MHz to 660 MHz, including pseudo-random binary sequence.
- The outputs of dual-channel instruments can be added (analog or EXOR, depending on model).
- User-retrofittable channels for most models
- Upward compatibility
- Individual solutions for frequencies up to 50, 80, 165, 330, 400 and 660 MHz
- 100% form/fit compatibility

## Glitch-free timing changes

Timing values can now be swept without the danger of misleading pulses or dropouts that could cause measurement errors. (Applies to continuous mode, values < 100 ms, consecutive values between 0.5 and twice the previous value on the 81101A, 81104A, 81110A)

## Reliable measurements

All models provide clean, accurate pulses with excellent repeatability, thus contributing to measurement integrity.

The Agilent 81110A features self-calibration for more accuracy. It also offers a choice of output modules. The Agilent 81111A 165 MHz 10 V module with variable transitions.

Along with the Agilent 81112A 330 MHz 3.8 V module, which has differential outputs and two selectable transition times.

The Agilent 81130A offers a choice of output modules: the Agilent 81131A 400 MHz, 3.8 V module and the Agilent 81132A 660 MHz, 2.5 V module which has complementary outputs.

## Easy-to-use

Features such as the clear graphical display, autoset, help, store/recall, preset TTL/ECL levels, selectable units (such as current/voltage, width/duty-cycle), and load compensation ensure a high level of convenience.

## Stimulate the device's environment

Today's devices can require very complex stimuli. To meet this, the Agilent 81130A can sequence and loop its memory for very deep patterns. RZ (return-to-zero), NRZ (non-return-to-zero) and R1 (return-to-one) formats are available. Digital channel addition allows the generation of signals with two different pulse widths and delays or of data rates up to 1.32 Gbit/s in one single channel.

## Frequency range

The Agilent 81130A is designed and recommended for an operation in the frequency range of 170 kHz to 400/660 MHz. However it can be operated in the extended range down to 1 kHz.

Double pulse delay range	(width + 10.0 ns) to (period- width - 10.0 ns)
Accuracy	$\pm 5\%$ $\pm 500$ ps
Transition time range (10/90)	5 ns to 200 ms variable
Accuracy	$\pm 10\%$ $\pm 200$ ps
Linearity	3% typ. for transitions > 100 ns

(1) Changing of amplitude may add 0.5 ns.

(2) Width accuracy specification is valid up to 5.5 Vpp amplitude. Above this amplitude, the width will typically increase up to 300 ps

**Burst Count:** 2 to 65536 (single or double pulses).

**Delay:** Delay, phase or % of period.

**Double pulse delay:** Double pulse and delay are mutually exclusive.

**Duty cycle:** Set between 0.1% and 95% (subject to width limits. 99.9% with overprogramming).

**Transition times:** These can be Entered as leading/ trailing edge or % of width. Leading and trailing edges are independent within one of the following overlapping segments (1:20 ratio):  
5 ns - 20 ns, 10 ns - 200 ns, 100 ns - 2  $\mu$ s, 1 $\mu$ s - 20  $\mu$ s, 10  $\mu$ s - 200  $\mu$ s, 100  $\mu$ s - 2 ms, 1 ms - 20 ms, 10 ms - 200 ms.

**Transition times:** These can be entered as leading/ trailing edge or % of width. Leading and trailing edges are independent within one of the following overlapping segments (1:20 ratio):  
5 ns - 20 ns, 10 ns - 200 ns, 100 ns - 2  $\mu$ s, 1 $\mu$ s - 20  $\mu$ s, 10  $\mu$ s - 200  $\mu$ s, 100  $\mu$ s - 2 ms, 1 ms - 20 ms, 10 ms - 200 ms.

**Repeatability:** Is typically four times better than accuracy

**Output timing fidelity:** Period, delay and width are continuously variable without any output glitches or dropouts.

## Level/Pulse Performance Characteristics

Level specifications are valid after a 30 ns typical settling time.

### Trigger Modes

**Continuous:** Continuous pulses, double pulses or bursts (single or double pulses).

**External triggered:** Each active input transition (rising, falling or both) generates a single or double pulse or burst.

**External gated:** The active input level (high or low) enables pulses, double pulses or bursts. The last single / double pulse or burst is always completed.

**External width:** The pulse shape can be recovered whilst the period and width of an external input signal are maintained. Levels and transitions can be set.

**Manual:** Simulates an external input signal.

**Internal triggered:** Internal PLL replaces an external trigger source.

### Inputs and Outputs

**Clock input/PLL reference and external input:** One input (BNC connector at rear panel) is used for clock input or alternatively for the PLL.

**PLL Reference:** The internal PLL is locked to an external 5 MHz or 10 MHz reference frequency.

**Clock input:** The output period is determined by the signal at CLK input.

**Ext. input:** Used for trigger, gate or external width.

**Level parameters:** Can be entered as voltage or current, as high and low level, or as offset and amplitude.

**Load compensation:** The actual load value can be entered (for loads  $\neq$ 50  $\Omega$ ) to display actual output values.

**On/off:** Relays connect/disconnect output (HiZ).

**Normal/complement:** Selectable.

**Limit:** Programmable high and low levels can be limited to protect the device-under-test.

**Input impedance:** 50  $\Omega$ /10 k $\Omega$  selectable.

**Threshold:** -10 V to +10 V.

**Max. input voltage:**  $\pm$ 15 V<sub>pp</sub>.

**Sensitivity:** 300 mV<sub>pp</sub> typical.

**Input transitions:** <100 ns.

**Frequency:** Dc to 50 MHz .

**Minimum pulsewidth:** 10 ns

**Strobe output and trigger output**

**Trigger format:** One pulse per period with 50% duty cycle typical.

**External mode:** 9 ns typ.

**Level:** TTL or ECL selectable.

**Output impedance:** 50  $\Omega$  typical.

**Max. external voltage:** -2 V/+7 V.

**Transition times:** 1.0 ns typical for TTL, 600 ps typical for ECL.

**Level parameters:** voltage or current, high or low level, offset or amplitude.

**On/off:** relays connect/ disconnect output (HiZ)

**Load compensation:** the actual load value can be entered (for loads ≠ 50 Ω) to display actual output values.

(Applies to the Agilent 81105A and Agilent 81111A only).

**Normal/complement:** selectable.

**Limit:** programmable high and low levels can be limited to protect the device-under-test.

## Channel Addition (with Agilent 81105A or Agilent 81111A output channels)

If the instrument is equipped with 2 output modules, channel 2 can be added to channel 1 internally. In this case the second output is disabled. The additional fixed delay on the second channel is typ. 2.5 ns. The following parameters differ from the above specifications if two output modules (Agilent 81105A/Agilent 81111A) are added.

<b>Max. frequency</b>	50 Ω channel 1 kΩ channel	60 MHz typ. 15 MHz typ.
<b>Min. transitions</b>	50 Ω channel 1 kΩ channel	2 ns typ. (channel one) 5 ns typ. (channel two) 20 ns typ. both channels

## Pattern Mode

**Pattern length:** 16 kbit/channel and strobe output.

**Output format:** RZ (return to zero), NRZ (non-return to zero), DNRZ (delayed non-return to zero).

**Random pattern:**  
PRBS  $2^{(n-1)}$   $n = 7, 8, \dots, 14$ .

## Trigger Modes

**Continuous:** continuous pulses, double pulses, bursts (single or double pulses) or patterns.

**External triggered:** each active input transition (rising, falling or both) generates a single or double pulse, burst or pattern.

**External gated:** the active input level (high or low) enables pulses, double pulses, bursts or patterns. The last single/double pulse, burst or pattern is always completed.

**External width:** the pulse shape can be recovered. Period and width of an external input signal is maintained. Delay, levels and transitions can be set.

**Manual:** simulates an external input signal.

**Internal triggered:** internal PLL replaces an external trigger source. Pulses, double pulses, bursts or patterns can be set.

## Inputs and Outputs

### Clock input/PLL reference and external input

**PLL reference:** (BNC connector at rear panel). The internal PLL is locked to an external 5 MHz or 10 MHz reference frequency.

**Clock input:** (BNC connector at rear panel). The output period is determined by the signal at CLK input.

**Ext. input:** used for trigger, gate or external width.

**Input impedance:**  
50  $\Omega$ /10 k $\Omega$  selectable.

**Threshold:** - 10 V to + 10 V.

**Max. input voltage:**  $\pm 15$  Vpp.

**Sensitivity:**  $\leq 300$  mVpp typical.

**Transitions:** < 100 ns.

**Frequency:** dc to max. frequency of output module.

**Min. pulsewidth:** 1.5 ns (as width of output module in external width mode).

### Strobe output and trigger output

**Strobe output:** user-defined, 16 kbit pattern (NRZ) when in pattern mode.

**Trigger format:** one pulse per period with 50% duty cycle typical. External mode: 1.5 ns typ. for Agilent 81110A. 5.9 ns typ. for Agilent 81104A.

**Level:** TTL or ECL selectable.

**Output impedance:** 50  $\Omega$  typical.

**Max. external voltage:** - 2 V/+7 V.

**Transition times:** 1.0 ns typical for TTL, 600 ps typical for ECL.

### Typical delay (Agilent 81110A with Agilent 81111A output module) <sup>[1]</sup>

Instrument mode	From	To	Typ. value
External width	Ext. Input	Strobe/Trigger out	8.5 ns
		Output 1/Output 2	19.5 ns
All other modes	Ext. Input/Clk Input	Strobe/Trigger out	12.0 ns
		Output 1/Output 2	26.0 ns
		Strobe/Trigger out	14.0 ns

[1] Subtract 4 ns from the typ. delay value when referring to OUTPUT1/2 for the Agilent 81112A output module and add 1 ns when referring to OUTPUT1/2 for the Agilent 81104A with the Agilent 81105A output module.

## 81130A Specifications

### Timing Characteristics

Measured at 50% amplitude at fastest transitions in continuous mode and 50  $\Omega$  source impedance. The Agilent 81130A is designed and recommended for an operation in the frequency range of 170 kHz to 400/660 MHz. However it can be operated in the extended range down to 1 kHz. Changes in specifications below 170 kHz are marked.

### Pattern and Sequencing

**Pattern length:** 65504 bit/channel. If PRBS is used: (65503-RBLength)

**Pattern formats:** NRZ (non-return-to-zero), DNRZ (delayed non-return-to-zero), RZ (return-to-zero) and R1 (return-to-one) can be selected (see figure 1)

**On/off:** Relays connect/disconnect output (HiZ).

**Sequencing:** A sequence is a succession of segments. One outer loop running once or continuous, and one nested loop can be applied. The nested loop can be set from 1 to 2<sup>20</sup> repetitions.

**Segment:** The memory can be divided into maximal 4 segments.

**Segment length resolution:** This is the resolution for which the segment can be set dependent on the maximum data rate. (see table 1)

**Limit:** Programmable high and low levels can be limited to protect the device-under-test.

**Segment types:** Pattern, PRBS, high and low segments ("0" or "1" levels segments selectable). Note: If one channel is set to PRBS the other channel can only be high or low segments, or PRBS type.

**Random Pattern:** PRBS 2<sup>n-1</sup>, n = 7,8,...,15 (CCITT 0.151)

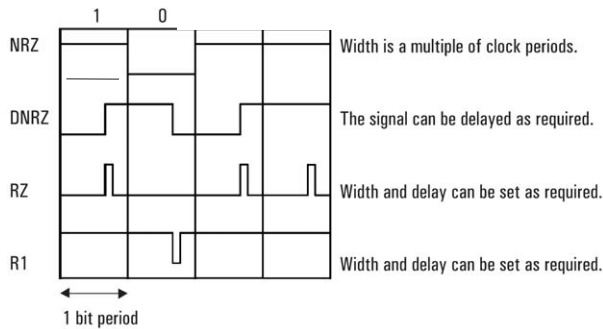

#### Output pattern formats

Non-return-to-zero

Delayed Non-Return-to Zero

Return-to-Zero

Return-To-One

#### Segment length resolution trade-offs

Required Segment length resolution (1)	Maximum data rate, Mbits/s
1 bit	41.67
2 bits	83.88
4 bits	166.67
8 bits	333.33
16 bits	660

(1) The minimum length in the first segment of a nested loop is two times that of the segment length resolution.

## Digital Channel Addition

Channel 1 can be logically combined with channel 2 (XOR) as shown in Figure 2. The source impedance remains 50 Ω. Output 2 is still available in this case.

Figure 2: Channel addition

## Trigger Modes

**Continuous:** Continuous pulses, bursts or patterns.

**External started:** Each active input transition (rising, falling edge) generates pulses, bursts or patterns.

**External gated:** The active input level (high or low) enables pulses, bursts or patterns. On an external gate signal the output is immediately stopped, that means the last cycle will not be completed.

**Manual:** Simulates an external input signal with push of a front panel button.

## Inputs and Outputs

Clock input/PLL reference and external input

**Connectors:** SMA (f) 3.5 mm

**Input impedance:** 50 Ω

**Termination voltage:** -2.10 V to 3.30 V

**Input sensitivity:** < 400 mV typ.

**Max. Input Voltage:** -3 V to + 6 V

**Input transitions:** < 20 ns

Only valid for clock input/PLL reference One input is used for clock input or for the PLL reference alternatively.

**Reference:** The internal PLL is locked to the 1,2,5 or 10 MHz. The output frequency of the instrument must be larger than the clock input/PLL reference frequency.

**External clock:** The output period is determined by the signal at clock input.

**Clock Input frequency:** 170 kHz to 660 MHz (at 50% ±10% duty cycle)

**Delay from input trigger output:** 21ns.

**Delay from input to output:** 53ns

**Threshold:** ac coupled  
Only valid for external input

**External input:** Used for external started or gated

**Input frequency:** DC to 330MHz

**Delay from external input to trigger output:** 22ns + 0 to 1 period

**Delay from external input to output:** 54 ns + 0 to 1 period

**Threshold:** -1.4 V to +3.7 V

## Trigger output

**Trigger format:** One pulse per period with 50% duty cycle typical. In pattern mode the trigger pulse can be set to mark the start of any segment.

**Output impedance:** 50 Ω typical.

**Level:** TTL/ETTL (for frequency < 180 MHz), 1 V to GND, ECL 50 Ω to GND/-2 V, PECL 50 Ω to + 3 V.

**Max. external voltage:** -2 V/+3 V.

**Transition times:** 1.0 ns typical for TTL, 600 ps typical for ECL.

**Delay from external input to trigger output:** 32 ns typical

### Programming times: (measured at display off.)

ASCII Command	Typical execution time
Width, delay, transition times	40 ms to 70 ms
Period within one range <sup>[1]</sup>	100 ms to 260 ms
Period between different ranges <sup>[1]</sup> :	
In pulse/burst mode	140 ms to 300 ms
in pattern mode	100 ms to 5.05 s
Levels	43 ms
Trigger modes	< 75 ms
Input parameters	28 ms
Save setting	200 ms
Recall setting:	
a) in pulse/burst mode	515 ms to 800 ms
b) in pattern mode with data and PRBS (depends on setting)	1.15 s to 5.5 s
65504 bit pattern transfer	1.25 s
Pattern and sequencing (depends on setting)	190 ms to 5.1 s

[1] Range depends on segment length resolution, see previous table

## Common Specifications

### User Interface

**Overprogramming:** all parameters can be overprogrammed (exceeding specifications) to fully exploit the hardware limits.

**Setting check:** warning messages indicate potentially conflicting parameters due to inaccuracy. Error messages indicate conflicting parameters.

**Help key:** displays a context-sensitive message.

**Autoset key:** resolves all timing conflicts.

**Non-volatile memory:** current setting is saved on power-down. Up to nine user settings and one fixed default setting can be stored in the instrument.

**Memory card:** 99 settings can be stored on a 1 MB PCMCIA card (MS-DOS®).

### Remote Control

Operates according to IEEE standard 488.2, 1987 and SCPI 1992.0.

Function Code: SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT1, C0.

ASCII command	Typ. exec. time
One parameter or mode	30 ms typ.
Recall setting	250 ms typ.
16 k pattern transfer	600 ms typ.

**Programming times:** All checks and display off.

## Specifications

Specifications describe the instrument's warranted performance. Non-warranted values are described as typical. All specifications apply after a 30 minute warm-up phase with 50  $\Omega$  source/load resistance. All specifications are valid from 0°C to 55°C ambient temperature.

## General

**Operating temperature:** 0°C to +55°C.

**Storage temperature:** -40°C to +70°C.

**Humidity:** 95% r.h. up to 40°C ambient temperature.

**EMC:** conforms to EN50082-1, EN 55011, Class A.

**Noise emission:** 5.7 bel typical.

**Battery:** Lithium CR2477-N.

**Safety:** IEC1010, CSA1010.

**Power requirements:**  
100-240 Vac,  $\pm 10\%$ , 50-60 Hz;  
100-120 Vac,  $\pm 10\%$ , 400 Hz.

**Power consumption:**  
300 VA max.

**Max. dimensions (H \* W \* D):**  
89 mm \* 426 mm \* 521 mm.

**Weight:** 9.2 kg net, 13.8 kg shipping.

**Recalibration period:**  
Three years recommended.

## Ordering Information - 81100 Family

The minimum configuration for a working instrument consists of a mainframe and one output module. The second output module can be added later. Output modules can be exchanged and retrofitted by the user. The Reference Guide (811xx-91021) is supplied with each mainframe for all configurations. A memory card is not included.

Each Agilent 81101A mainframe includes one output channel (in comparison to the other models of the Agilent 81100 family). The output module of the 81101A does not need to be ordered separately.

### Agilent 81104A

80 MHz Pulse/Pattern Generator Mainframe

Output module:

**Agilent 81105A** 80 MHz, 10 V

### Agilent 81110A

330/165 MHz Pulse/Pattern Generator Mainframe

Output modules:

**Agilent 81111A** 165 MHz, 10 V

**Agilent 81112A** 330 MHz, 3.8 V

**Note:** Only use output modules of the same module number. A combination of the Agilent 81111A and Agilent 81112A in one Agilent 81110A is not possible.
