Overview

The Agilent U2500A Series USB simultaneous sampling multifunction data acquisition (DAQ) devices are high-performance modules that consist of three models—the U2531A, U2541A, and U2542A. The U2500A Series provides up to four channels with resolutions of 14-bit and 16-bit. The U2531A can sample up to 2 MSa/s for each channel with a resolution of 14 bits, while the U2541A and U2542A can sample up to 250 kSa/s and 500 kSa/s for each channel respectively with a resolution of 16 bits.

Various features of the U2500A Series

- Quick and easy USB setup
- High sampling rate of up to 2 MSa/s for each channel
- Dedicated ADC that allows simultaneous sampling of data
- Flexible standalone or modular capability that enables lower startup cost
- SCPI and IVI-COM supported with a wide range of ADE compatibility that minimizes work time and increases software choices
- Easy-to-use application software and command logger function for easy SCPI command conversion into snippets of VEE, VB, C++, and C# code

Quick and easy setup

The USB 2.0 interface provides easy connectivity and setup that allows the automatic detection of the U2500A Series. This easy setup makes the U2500A Series ideal for the education environment. With the quick and easy USB connectivity, the U2500A Series is simple enough for academic application and yet robust and versatile enough for industrial laboratory applications.

Flexible Standalone or Modular Capability

The U2500A Series is uniquely designed for the flexibility of functioning as a standalone or modular unit. You can reduce your startup cost by using the U2500A Series as a standalone unit. On the other hand, using the U2500A Series as a modular unit, you will be able to expand your application system—in terms of channel count and functionality—by slotting in various modular units into the U2781A.

High Sampling Rate of up to 2 MSa/s

The U2500A Series provides a high analog input sampling rate coverage of up to 2 MSa/s for each channel. The high sampling rate coverage offered is ideal for transient signal applications such as sonar analysis.

Simultaneous Sampling of Data

The U2500A Series has dedicated ADCs that enable simultaneous signals acquisition, which makes the U2500A Series suitable for your phase-sensitive applications.

Supports SCPI and IVI-COM, compatible with wide range of ADE

With IVI-COM, you are able to program with any popular Application Development Environment (ADE) that is available in the market. Thus, you can pick any programming language that you are most familiar with. The U2500A Series is compatible with a wide range of ADEs, thus it minimizes the time required to set up the devices in different software environments as they can be programmed directly using SCPI commands.

The following list contains some of the popular development environments that the U2500A Series is compatible with:

- Agilent VEE and Agilent T&M Toolkit
- MATLAB® R2007a
- Microsoft® Visual Studio® .NET™, C/C++ and Visual Basic®
- LabVIEW®

Easy-to-use bundled software and the command logger function

The Agilent Measurement Manager application software provides you with a quick and easy means to configure and control your device without requiring any programming work. Simplifying this further is the command logger function offered in the Agilent Measurement Manager that allows capturing of configuration commands that can be easily converted to snippets of VEE code. Other supported languages are VB, C++, and C#.
