# Analysis applications

A wealth of functions supported.

## Inrush current crest value

The peak hold function displays the crest value of the inrush current occurring when apparatus electrical is started.

## RMS value of full-wave rectified waveforms

The AC+DC mode enables measurement of the RMS value of full- or half-wave rectified waveforms used in electrical machinery.

## Waveform and harmonic analysis

Using the external output functions of the 3284 or 3285 in combination with a HIOKI MEMORY HiCORDER enables recording of current and frequency fluctuations and recording and harmonic analysis of instantaneous waveforms. The monitor output (MON) spans a wide frequency range from DC to 20 kHz (15 kHz in the case of 3285), which allows the units to be used for electric current analysis in various fields ranging from batteries to inverters.

### Example of analysis using the MEMORY HiCORDER

## 3284 / 3285 Specifications

Accuracy at 23 °C ± 5 °C (73 °F ± 9 °F), 80% rh or less. Measurement accuracy applies to input of at least 5% of the current range, and at least 10% of the voltage/frequency range.
