- No USB or port involvement
- No software drivers
- Plays and records standard MP3 files
- Separate outputs and Inputs allows operation as just “digital player” or just “analog adapter”
- No moving parts
- 3 year warranty
- Manufactured in USA

### Description

The SX8500 is a new “All-In-One” digital Player/Recorder/Adapter, designed to provide the ultimate solution in a continuous play audio source in message and music on hold applications for regular analog telephones.

This device delivers outstanding audio quality storing recordings on a non-volatile removable flash card. Unlike other flash based cards that compress the audio, audio is recorded directly into solid state memory in it’s natural, uncompressed form providing superior quality voice and music.

The SX8500 has integrated Adapter/Controller support for up to 4 lines when used with standard Non KSU type phones. It activates via Hold or Flash button on any phone and requires no attachments to the phone. The SX8500 even works on cordless phones just by pressing the Hold button and supports as many telephones as the customer may have.

The SX8500 can record it’s flash cards automatically Via email by connecting it to “audio jack” connector on any PC and simply playing the MP3 or wave audio file and/or by pressing the REC button. There is minimum user involvement, no software drivers to install, no USB ports to find and no PC operating systems to worry about. This is the same process already used to get approval on a production. For users less computer savvy or with no email access, a flash card can always be mailed.

SX8500 provides an easy to use, easy to update, fast turnaround and complete solution in message on hold applications for the regular analog telephones.
