Options & Accessories Desktop Spectrumanalyzer X Series

**Option 020: Internal 15dB low-noise preamplifier**

This option provides an internal, super low-noise 15dB preamplifier, enabling maximum performance particularly when measuring extremely weak signals. It is switched via a TRUE RF switch. There really is no excuse for not ordering this one, considering its very attractive price!

The maximum sensitivity of the V4 X series without option 020 is lower by 15dB.

*Order/Art.-No.: 177*

---

**Option 002: 0.5PPM TCXO timebase**

(Only available for Spectran® HF-60100 V4 X).

This highly precise TCXO timebase, which has been especially developed for the SPECTRAN®, offers significantly reduced phase noise (jitter). This will allow the use of far narrower filters (in development), which will in turn vastly enhance sensitivity. To fully exploit the maximum sensitivity of the HF-60100 V4 X, this option is indispensable! Furthermore, the TCXO timebase allows far more accurate frequency measurement and display and is therefore a MUST HAVE for future applications like time-domain measurements or code-selective measurement of UMTS, all already in development.

The standard accuracy without option 002 is 50ppm.

*Order/Art.-No.: 181*

---

**Option 022: 40dB low-noise preamplifier DC-1GHz**

This option provides an external, super low-noise 40dB preamplifier, enabling maximum performance particularly when measuring extremely weak signals at an EN55011, EN55022 or EN50371 EMC-test. If you use our BicoLOG antenna or our PBS1 Probeset and EMC-Sniffer this amplifier is a MUST HAVE to get the best performance!

The 40dB preamplifier is already included in the EMC-Bundle1.

*Order/Art.-No.: 177-2*

---

**Option 010: 30MHz frequency extension**

*Available for: NF-5030 X.*

Our 30MHz frequency extension extends the frequency range of the NF-5030 to the absolute maximum. The new frequency range is 1kHz - 30MHz. Amongst others, it even allows measurement of VDSL2. The higher clock frequency of the DDC provided by this option is a MUST HAVE for technicians and authorities needing ACCURATE assessment of signal sources of up to 30MHz. The maximum frequency of the NF-5030 without option 010 is 1MHz.

*Order/Art.-No.: 179-1*

---

**DC-Blocker (SMA)**

It prevents the RF-input of the SPECTRAN to be destroyed by the DC-voltages of f.e. DSL/ISDN lines.

*Order/Art.-No.: 778*

**Calibration Resistor (DC-18GHz)**

This calibration resistor is necessary for the best possible calibration of the noise-floor of each Spectran V4 X-Analyzer.

*Order/Art.-No.: 779*

**20dB high-end Attenuator**

Expands the measurement range to +40dBm. (ONLY SPECTRAN HF-60100 V4 X).

*Order/Art.-No.: 775*
