MODEL CM-8822

Measure the thickness of non-magnetic coatings on non-magnetic or magnetic substrates.

- Choice of remote probe; F probe measures the thickness of non-magnetic coatings on magnetic substrates; N probe measures the thickness of non-magnetic coatings on non-magnetic substrates
- Automatic probe recognition
- Automatic calibration
- Large, easy-to-read LCD provides exact readings without guessing or errors
- $\mu\text{m}/\text{mil}$ conversion switch
- Includes hard carrying case and batteries

Range: 0 to 1000 μm , 0 to 40 mil

Resolution: 0.1 μm

Accuracy: ± 1 to 3% or 2 μm ,
whichever is greater

Sampling Time: 1 second

Power Supply: 4 x 1.5V "AA" batteries

Dimensions: 6.3 x 2.7 x 1.25" (161 x 69 x 32mm)

Weight: 9 oz (260g)
